Project Phase 2 – Review 1

Evaluation Rubrics (30 Marks)

Academic Year: _____ Semester / Section: _____ Project Title: _____

Evaluated by: ☐ Guide ☐ Internal Panel Marks awarded: ☐ Per team ☐ Per student Date: _____

Six parameters, each scored on a 5-point scale (5 = Excellent, 1 = Poor). Maximum 30 marks.

Parameter	5 – Excellent	4 – Very Good	3 – Good	2 – Fair	1 – Poor	CO
Objective Achievement & Implementation Progress	All Phase 2 milestones planned for this review are completed and integrated with the Phase 1 baseline. Work carries forward cleanly from Phase 1 and the end-to-end workflow runs.	Most planned milestones are completed. Integration with the existing system is largely done, with some parts still being refined.	Core milestones are implemented but integration is partial. Only selected parts of the workflow can be demonstrated.	Limited progress beyond Phase 1. Modules exist but are not connected; workflow is unclear.	Minimal or incorrect implementation. No demonstrable progress since Phase 1.	CO1, CO2
Testing, Validation & Result Analysis	Testing performed on defined test cases or datasets. Appropriate metrics used; results are presented clearly and interpreted in relation to the stated objectives.	Testing and validation carried out on relevant cases. Results are presented and explained, but analysis lacks depth or comparison.	Basic testing shown on limited cases. Evaluation is present but interpretation of results is minimal.	Very limited testing. Approach is unclear or not aligned with objectives; results shown without explanation.	Minimal or incorrect testing. Results are missing or not interpretable.	CO1, CO2
Research Paper Progress & Submission	Well-written paper with clear methodology, results and proper citations, submitted to an identified conference or journal with acknowledgement / acceptance on record.	Complete paper with all sections present; minor issues in clarity or format. Submitted, or fully ready for submission with the target venue identified.	Draft complete with all major sections present but limited depth; methodology or results not well justified. Venue not yet finalised.	Partially complete draft; some sections missing or poorly written; lacks clarity and structure.	Minimal or draft-level work; major sections missing or no meaningful content.	CO4
Project Planning, Progress Tracking & Risk Management	Updated Gantt chart with tasks, timelines and dependencies. Planned vs actual progress against the Phase 1 plan is shown. Risks identified with clear mitigation and evidence of adjustment.	Gantt chart updated with tasks and timelines. Some progress tracking shown. Risks identified with basic mitigation strategies.	Basic timeline or task list provided. Limited tracking of progress. Risks mentioned but not analysed.	Incomplete or unclear planning. Plan not updated since Phase 1. Risks vague or irrelevant.	No structured planning. No Gantt chart or risk identification.	CO4
SDG Alignment & Societal Impact	Relevant SDG(s) clearly identified and strongly connected to the work. Beneficiary community identified and impact explained with specific examples.	SDG identified and reasonably linked to the project. Impact explained but remains general.	SDG mentioned but linkage is weak or generic. Limited explanation of impact.	SDG identified incorrectly, or explanation does not clearly relate to the project.	No SDG identified and no explanation provided.	CO3
Presentation & Viva Voce	Well-structured presentation with clear explanation of problem, approach and results. Strong understanding shown; questions answered with clear justification. Team contribution is evident.	Clear and organised presentation. Most aspects explained correctly; responses show understanding with minor gaps.	Presentation covers basic aspects but lacks clarity or depth. Answers to questions are partial.	Presentation unclear or poorly organised. Difficulty explaining key concepts.	Very weak presentation. Unable to explain the work or answer questions.	CO5

Similarity / Plagiarism Compliance (mandatory gate)

A similarity report from an approved tool must be submitted along with the paper draft, excluding references and standard phrases. Overall similarity must be 10% or below.

If similarity exceeds 10% or no report is submitted, the marks for "Research Paper Progress & Submission" are capped at 2 for this review, irrespective of the quality of the paper. The team must resubmit a compliant report before Review 2.

Total Marks: _____ / 30 **Signature of Evaluator: _____**

Course Outcomes (COs)

CO1	Develop and apply appropriate models and techniques to design and implement effective solutions for complex problems.
CO2	Demonstrate the use of appropriate tools, libraries, or platforms for implementation and deployment.
CO3	Identify the community that shall benefit through the solution and demonstrate concern for environment.
CO4	Document the complete project lifecycle using structured and professional formats.
CO5	Communicate findings, demonstrate working solutions, and defend design choices through oral/poster presentations in teams.

Notes for Evaluators

1. Progress is judged against the objectives and plan approved at the end of Phase 1, not against the number of objectives a team has declared.
2. Acceptance or publication of the paper is one route to the top band, not a requirement. A strong paper submitted to an identified venue may be awarded 5.
3. Where a team falls between two bands, award the lower band and record a one-line justification.
4. Evidence to be produced at the review: working demonstration, test results, updated Gantt chart, paper draft, and similarity report.
